

REV. 12/98
Modified PTO 1082
For Other Than A Small Entity

PATENTS

Attorney Docket No. UV-98

Applicants : Pamela L. McKissick et al.
For : ELECTRONIC PROGRAM GUIDE WITH
ADVANCE NOTIFICATION

Hon. Assistant Commissioner
for Patents
Washington, D.C. 20231

TRANSMITTAL LETTER FOR
ORIGINAL PATENT APPLICATION

Sir:

Transmitted herewith for filing are the [X]
specification; [X] claims; [X] abstract; [X] unexecuted
declaration, for the above-identified patent application.

Also transmitted herewith are:

[X] 24 sheets of:

[] Formal drawings.

[X] Informal drawings. Formal drawings will be filed
during the pendency of this application.

[] An assignment of the invention to _____

[] A check in the amount of \$40.00 to cover the
recording fee.

[] Please charge \$40.00 to Deposit Account No. 06-1075
in payment of the recording fee. A duplicate copy
of this transmittal letter is transmitted herewith.

Express Mail #EH623264523US
Date of Deposit: August 20, 1999

The filing fee has been calculated as shown below:

FOR	NUMBER FILED	NUMBER EXTRA	RATE	FEE
BASIC FEE				\$ 760.00
TOTAL CLAIMS	84 - 20 = 64		x \$18 =	\$1152.00
INDEPENDENT CLAIMS	9 - 3 = 6		x \$78 =	\$ 468.00
[] MULTIPLE DEPENDENT CLAIMS			+ \$260 =	\$.00
TOTAL				<u>\$2380.00</u>

- [X] A check in the amount of \$2380.00 in payment of the filing fee is transmitted herewith.
- [X] The Commissioner is hereby authorized to charge payment of any additional filing fees required under 37 C.F.R. § 1.16, in connection with the paper(s) transmitted herewith, or credit any overpayment of same, to deposit Account No. 06-1075. A duplicate copy of this transmittal letter is transmitted herewith.
- [] Please charge \$_____ to Deposit Account No. 06-1075 in payment of the filing fee. A duplicate copy of this transmittal letter is transmitted herewith.
- [X] An Information Disclosure Statement is enclosed.

ELECTRONIC PROGRAM GUIDE
WITH ADVANCE NOTIFICATION

Cross Reference to Related Application

This application claims the benefit of
5 United States Provisional Application No. 60/097,504,
filed August 21, 1998.

Background of the Invention

This invention relates to program guide
systems, and more particularly, to techniques for
10 notifying a user of television programs.

Cable, satellite, and broadcast television
systems provide viewers with a large number of
television channels. Viewers have traditionally
consulted printed television program listings to
15 determine which programs were scheduled to be broadcast
on a particular day and at a particular time.

Recent technological advances have allowed
more convenient and advanced program guide services to
be developed. For example, passive television-based
20 program guides have been developed that allow
television viewers to view television program listings
directly on their television sets. In addition,

interactive television program guide services have been developed that allow a service provider to deliver television program listings data to a user's local set-top box. An interactive television program guide application in the set-top box allows the user to display television program listings on the user's television set. In known interactive program guide systems, the program listings data made available to a user are limited to a predetermined time frame of program listings.

Users may be interested in programs other than the programs in the available time frame of program listings. Such so-called non-frame television programs are those television programs which are outside the current display time frame. In contrast, in-frame television programs are those television programs which are inside the current display time frame. The current display frame for program guides is typically about two weeks or less, which is limited by the size of the program guide database that is maintained by the program guide. The frame can also be limited by the bandwidth for the distribution of the data and limited by the ability to collect accurate data (e.g., collected listings which are farther out in time can be less accurate). As an example of the category of non-frame television programs, consider movies presently showing in movie theaters but soon to be released on pay-per-view cable. Because cable customers are not provided with information that lets them know that the movie they are planing to see at the local movie theater will be available shortly on cable, cable companies stand to lose revenue to movie theaters. Similar problems exist for televised sporting events and the like.

Thus, users are still faced with the problem of tracking television programs that they desire to watch but which have not yet been scheduled (i.e., non-frame television programs).

5 It is therefore an object of the present invention to provide a way to notify users of upcoming television programs.

Summary of the Invention

10 This and other objects of the invention are accomplished in accordance with the principles of the present invention by providing program guide notification methods and systems.

15 Users may be interested in programs which are not in a current program listings time frame of a program guide. For such programs, the program guide can provide a notification option. The notification option can provide the user with an opportunity to request that a notification to be received when a program of interest is determined to be in the current
20 time frame. Notifications can be message notifications, reminder notifications, e-mail notifications, etc. The user can be provided with the opportunity to setup the parameters for notifications. The program guide can provide the user with the
25 opportunity to view a list of notifications. Notifications can be set by selecting an advertisement for an upcoming program that is not presently in the current time frame, by entering a title of a program, by selecting a program from a coming soon display
30 screen, etc. A notification can include information on the program for which the notification is being provided and can include user-selectable options. The program guide can monitor the user's notification

requests to collect information that can be used in marketing, scheduling programs, advertising, etc.

According to one aspect of this invention, a method of providing interactive options for non-frame television programs on a display screen of a system (e.g., a television program guide system) is provided. The method includes: (1) presenting on the screen (e.g., a program guide screen) at least one option that corresponds to a non-frame television program,
10 (2) allowing the user to select a first option, and
(3) providing the user a service associated with the first option.

In another embodiment, an interactive method of notifying a user of non-frame television programs that are now in-frame for use with a system (e.g., a television program guide system) is provided. This method includes: (1) receiving non-frame data that corresponds to at least one non-frame television program, and (2) when the non-frame program is in-
20 frame, notifying a user that the program will be broadcast in the current time-frame by providing the user with at least one interactive option that corresponds to the data.

In yet another embodiment according to this invention, a method for providing notifications of non-frame television programs to a user using a system (e.g., a television program guide system) is provided. The method includes: (1) allowing a user to specify a non-frame television program outside of the current
30 display time frame, and (2) notifying the broadcast time to the user when the non-frame television program is now in the current time frame. In this embodiment, notification can be either non-interactive or interactive. In one non-interactive example, the

method can involve sending a notification (or providing a notification order screen) with information regarding one or more selected non-frame television programs that are to be aired without a user-selectable option. In
5 contrast, an interactive example might include a user-selectable option.

A coming soon program display screen can be provided according to this invention. Included on the coming soon program display screen are non-frame
10 television programs which are outside the current display time frame.

If a user selects a program or a pay-per-view event that has not yet been included in the program listings of the current time frame, additional
15 information related to the program or event can be displayed in a program information box. In addition to viewing this additional information on the program selected, the user can order a notification to notify the user when the selected program will be broadcast.
20 Options can also be provided that allow the user to determine when notifications will be generated.

If desired, a notification can be set by directly entering the title of a television program for which notifications are desired.

25 As mentioned above, the user can also view a list of all currently requested notifications. If desired, information, such as the program name, type of notification, and the date and time the request was submitted can be displayed on the list for each
30 notification. Entries can be added to the current notification list as soon as the user submits a new request. In addition, the user can cancel notification entries.

In yet a further aspect of the invention, electronic mail notifications can be set and generated based on other preferences which the user can specify.

Further features of the invention (including
5 systems for implementing these methods), its nature and various advantages will be more apparent from the accompanying drawings and the following detailed descriptions of the preferred embodiments.

Brief Description of the Drawings

10 FIG. 1 is a diagram of an illustrative television program guide system in accordance with the present invention.

FIG. 2 is a diagram of an illustrative main program guide menu display screen in accordance with
15 the present invention.

FIG. 3 is a diagram of an illustrative current listings display screen from which the program listings in the current time frame can be available in accordance with the present invention.

20 FIG. 4 is a diagram of an illustrative notifications display screen which can provide an illustrative notifications list in accordance with the present invention.

FIG. 5 is a diagram of an illustrative
25 messages display screen which can include a list of messages in accordance with the present invention.

FIG. 6 is a diagram of an illustrative message display screen in accordance with the present invention.

30 FIG. 7 is a diagram of an illustrative notification display screen in accordance with the present invention.

FIG. 8 is a diagram of an illustrative reminder display screen in accordance with the present invention.

FIG. 9 is a diagram of an illustrative set
5 message display screen in accordance with the present invention.

FIG. 10 is a diagram of an illustrative e-mail display screen in accordance with the present invention.

10 FIG. 11 is a diagram of an illustrative new notification display screen in accordance with the present invention.

FIG. 12 is a diagram of an illustrative reminder list display screen in accordance with the
15 present invention.

FIG. 13 is a diagram of an illustrative coming soon display screen in accordance with the present invention.

FIG. 14 is a diagram of an illustrative
20 coming soon display screen in accordance with the present invention.

FIG. 15 is a diagram of an illustrative setup display screen in accordance with the present invention.

25 FIG. 16 is a diagram of an illustrative notification setup display screen in accordance with the present invention.

FIG. 17 is a flow chart of illustrative steps involved in providing a notification feature in
30 accordance with the present invention.

FIG. 18A is a diagram of an illustrative program guide screen containing television program guide listings in accordance with the present invention.

FIG. 18B is a diagram of an illustrative coming soon program screen in accordance with the present invention.

FIG. 19 is a diagram of an illustrative notification screen that allows a user to enter information for ordering notifications in accordance with the present invention.

FIG. 20 is a diagram of an illustrative notification screen that allows the user to enter more specific information for ordering notifications in accordance with the present invention.

FIG. 21 is a diagram of an illustrative notification in accordance with the present invention.

FIG. 22 is a diagram of an illustrative notification screen listing all current notification orders in accordance with the present invention.

FIG. 23 is a diagram of an illustrative notification screen that allows a user to enter a program title and to select among various options when ordering a notification in accordance with the present invention.

Detailed Description of the Preferred Embodiments

An illustrative interactive television program guide system 10 in accordance with the present invention is shown in FIG. 1. Main facility 12 can contain a back office processor 14 for organizing data, such as television program guide listings data, as will be described in greater detail below. Main facility 12 can also contain a program guide database 16 for storing program guide information, pay-per-view ordering information, television program promotional information, etc. Some of the information stored in database 16 can be from an external data source 18.

Back office processor 14 is used to process the information stored in database 16.

Information from database 16 can be transmitted to multiple television distribution facilities, such as television distribution facility 20 via communications links, such as communications link 21. Only one television distribution facility is shown in FIG. 1 to avoid over-complicating the drawings. Each Link 21 can be a satellite link, a telephone network link, a cable or fiber optic link, a microwave link, a combination of such links, or any other suitable communications path. If it is desired to transmit video signals over link 21 in addition to data signals, a relatively high bandwidth link, such as a satellite link is generally preferable to a relatively low bandwidth link, such as a telephone line.

Television distribution facility 20 is a facility for distributing television signals to users. Television distribution facility 20 can be, for example, a cable system headend, a broadcast distribution facility, a satellite television distribution facility, or any other suitable distribution facility.

The program guide information transmitted by main facility 12 to television distribution facility 20 includes television program listings data for current and future television programs. The television program listings data for each program preferably includes numerous program characteristics, e.g., the title of the program, the channel for the program, a scheduled broadcast time (start time) and an ending time (or duration). Other typical program characteristics include ratings, critics ratings, descriptions,

categories (sports, movies, comedy, children, etc.), actors, etc. Transmitted program information can also include advertising information and pay program data, such as pricing information for individual programs and
5 subscription channels, time windows for ordering programs and channels, telephone numbers for placing orders that cannot be impulse ordered, etc.

Television distribution facility 20 distributes television programming and program guide
10 information to the user television equipment 26 or the user personal computer (PC) equipment 28 of multiple users via communications paths 30 and 32, respectively. PC equipment 28 is based on a central processing unit (CPU) 44 and can have a monitor 46 and keyboard 48.
15 User television equipment 26 is based on a set-top box 34 and can have optional videocassette recorder 38, television 40, and remote control 42.

Various techniques can be used to distribute television programming and program guide information.
20 For example, television programming can be distributed over analog television channels and program guide data can be distributed over an out-of-band channel on paths 30. Data distribution can also involve using one or more digital channels on paths 30 and 32. Such
25 digital channels can also be used for distributing television programming and other information. Multiple television and audio channels (analog, digital, or both analog and digital) can be provided to set-top boxes 34 and PC equipment 28 via communications paths 30 and 32.
30 In user television equipment 26, television programs can be tuned to by user's set-top box 34 and can be displayed by television 40. In user PC equipment 28, a video board or other such component can be used to tune to a television program, and the television program can

be displayed on monitor 46. Program listings and other information can be distributed via communications paths 32 to PC equipment 28, which can have a cable modem or other such communications device for receiving or transmitting data. In addition, program listings and other data can be distributed by one or more distribution facilities that are similar to but separate from television distribution facility 20 using communications paths that are separate from communications paths 30 and 32. If desired, data from the main facility 12 can be distributed to PC equipment 28 over the Internet or other suitable communications path that does not involve the use of television distribution facility 20. In some configurations, program guide functions are provided in the form of an on-line program guide by using PC equipment 28 to access a web server, such as web server 29 over the Internet 31 or other such data network.

The program guide system can use a client-server architecture whether or not the system involves use of the Internet. In a client-server arrangement, the program guide is partially implemented on a server and partially implemented on a client. The server can be a server, such as server 22 located at, for example, television distribution facility 20. Processors in the user equipment, such as set-top box 34 or CPU 44, can act as the client processors. Program guide data that are distributed to a client-server program guide at television distribution facility 20 can be stored in a database 24 at television distribution facility 20 that is maintained by server 22. For clarity, the present invention is described primarily in the context of an interactive television program guide that is

implemented on user equipment using a set-top box 34 or CPU 44 that receives data from television distribution facility 20, rather than in the context of program guides that are implemented using an on-line program
5 guide configuration, are implemented partially on a server and partially on user equipment, or are implemented using any other such arrangements.

Certain functions, such as pay program purchasing can require set-top boxes 34 to transmit
10 data to television distribution facility 20 over communications paths 30. If desired, such data can be transmitted over telephone lines or other separate communications paths. If functions, such as these are provided using facilities separate from television
15 distribution facility 20, some of the communications involving set-top boxes 34 can be made directly with the separate facilities.

User television equipment 26 has a receiver, which is typically a set-top box, such as set-top
20 box 34, but which can be other suitable television equipment into which circuitry similar to set-top box circuitry has been integrated. For example, user television equipment 26 can be based on an advanced television receiver, such as a high definition
25 television ("HDTV") receiver. Program guide data can be distributed to set-top boxes 34 periodically or continuously and stored in database 36. In a client-server architecture, this database need not be maintained on the set-top box and may be distributed
30 over a number of different locations. For example, the program guide can maintain a database, such as database 24, using a server, such as server 22 located at television distribution facility 20 or at some other appropriate location or locations. Television

distribution facility 20 can poll set-top boxes 34 periodically for certain information (e.g., pay program account information or information regarding programs that have been purchased and viewed using locally-generated authorization techniques).

Main facility 12 preferably contains a processor to handle information distribution tasks. Each set-top box 34 preferably contains a processor to handle tasks associated with implementing a program guide application on the set-top box 34. User PC equipment contains CPU 44 to handle tasks associated with implementing a program guide application. Television distribution facility 20 can contain a processor for tasks associated with monitoring a user's interactions with the interactive program guides implemented on user PC equipment 28 and user television equipment 26 and for handling tasks associated with the distribution of program guide data and other information to user PC equipment and user television equipment 26. Moreover, the processor of television distribution facility 20 can be used to support the server functions of a client-server program guide.

In user television equipment 26, videocassette recorders 38 or other suitable recording devices allow selected television programs to be recorded. Each videocassette recorder 38 is connected to a respective television 40. To record a program, set-top box 34 tunes to a particular channel and sends control signals to videocassette recorder 38 (e.g., using an infrared transmitter) that direct videocassette recorder 38 to start and stop recording at the appropriate times.

During use of the interactive television program guide implemented on set-top box 34, television

program listings and other information can be displayed on television 40. Such program guide displays can be presented as an overlay on top of a television program to which the user has tuned with set-top box 34 or can be presented in place of such a program. Each set-top box 34, videocassette recorder 38, and television 40 can be controlled by one or more remote controls 42 or any other suitable user input interface, such as a wireless keyboard, mouse, trackball, dedicated set of buttons, touch screen display remote, etc. Remote controls, such as remote control 42, have various buttons that can be pressed by the user such as arrow keys (for directing on-screen movement of a highlight region, scrolling functions, etc.), an OK, select, enter, or other such selection key for making a selection (hereinafter referred to as an OK key), channel number keys (for selecting a television channel), a favorites key (to invoke functions related to user preferences), a delete key (to delete menu items or to express a disinterest in certain user preferences), etc.

PC equipment, such as PC equipment 28, is based on a CPU 44 that maintains a database 45. A program guide implemented on PC equipment 28 can be used to access and display program guide information on monitor 46. User selections and inputs can be made by a keyboard 48, mouse, trackball, or other PC input devices. It is understood that the following discussion, although directed to user television equipment and set-top boxes, is applicable to program guides used in connection with PC equipment.

Notification can be presented in a number of ways, such as "on-screen," "on-line," etc. As used herein, "on-line" notification includes notifications

transmitted, at least in part, using the Internet.
"On-screen" notification includes notifications
transmitted to user-television equipment. "On-screen"
and "on-line" notification methods are not mutually
5 exclusive. For example, a notification can take the
form of an electronic mail message "e-mail" that was
transmitted via the Internet and displayed on user
television equipment.

A program guide display screen can include a
10 notifications option. For example, as shown in FIG. 2,
illustrative main program guide menu display screen 60
can include notifications option 62 and six other
options (current listings option 64, movies option 66,
Pay-per-view option 68, messages option 70, coming soon
15 option 72, and setup option 74). In addition, display
screen 60 can include brand logo 82, system operator
logo 84, current-time display portion 86, new message
indicator 88, and advertisements 76, 78, and 80.

Brand logo 82 can identify the brand of the
20 interactive program guide (e.g., TV Guide). System
operator logo 84 can identify the brand of the system
operator. Current-time display portion 86 can contain
the current time of day. New message indicator 88 can
indicate that there are messages available.

25 A program guide user can select an option by,
for example, navigating a highlight region on a
selectable option and pressing a data entry key, such
as an OK key of a remote control.

A notification option can be available for
30 programs that are not in the current program listings
time frame of the program guide. Such out-of-time-
frame programs (i.e., non-frame programs) can include
programs that are not in the current time frame of the
program guide, but are in a schedule stored at a main

facility. Such non-frame programs can further include
unscheduled programs that have related information at
the main facility indicating that they are coming soon
(e.g., movies in current cinematic release, new series
5 that have been announced but not yet scheduled,
returning series which have not yet been scheduled,
special events, etc.). Such non-frame programs can
further include programs that the user can know of but
for which the main facility has no available
10 information.

The program guide system can store a list of
programs which are not in the current time frame but
have been scheduled or which are upcoming programs
that have not yet been scheduled. The list can be
15 stored at a main facility, at a server at a television
distribution facility, or at user television equipment.
When a user is provided with the opportunity to enter a
title for a program (see below), the list can be
searched for programs matching the entered title. The
20 search can occur at the location where the list is
stored. As programs move into the current program
guide time frame, the comparison between the database
programs in the current program guide time frame and
programs in the user's notifications list can take
25 place at any of those locations (e.g., main facility,
server, or user television equipment).

For programs that are already in the current
time frame of a program guide, a notification can not
be available, although a reminder option can be
30 available.

When a user selects current listings
option 64, the program guide can display a current
listings display screen, such as illustrative current
listings display screen 96 of FIG. 3. From the current

listings display screen 96, the program guide can provide the user with the opportunity to view a time versus channel listing of programs. The display 96 can provide the user with the opportunity to view and act
5 on the program listings for the current time frame (e.g., one week, two weeks, etc.). The program guide can retrieve the program listings for the current time frame from a local database (e.g., database 24 or 36 of FIG. 1).

10 When a user selects movies option 66 or pay-per-view option 68, the program guide can display a listings display screens for the current time window of movies or pay-per-view programs. Each listings display screens can have a format which is similar to
15 illustrative current listings display screen 96. It is to be understood that the format for display screen 96 is illustrative and other formats for listings display screens can be employed.

When a user selects a notification option,
20 such as notifications option 62 of FIG. 2, the program guide can display illustrative notifications display screen 90 of FIG. 4. Display screen 90 can include list 92 of notifications that the user has previously set (e.g., notifications for the Blair Witch Project,
25 Now and Again, and the Mummy). The program guide can provide the user with the opportunity to select any one of the displayed notifications in order to delete or modify the selected notification. An add new notification option, such as option 94, can provide the
30 user with the opportunity to add a new notification to the list. The add new notification option can be contained in list 92 or can be in another suitable position on display screen 90.

When a user selects a messages option, such as messages option 70 of FIG. 2, the program guide can display a messages display screen, such as illustrative messages display screen 98 of FIG. 5. Display

5 screen 98 can include a list of messages 100. The list 100 can include all messages that have been sent to this user's household. List 100 can include notification messages (e.g., the first two messages in list 100). Other types of messages can be included in
10 list 100, such as a message for informing the user of a cable outage. A user can select a message from list 100 by navigating a highlight region on an item in the list and pressing a data entry key, such as an OK key of a remote control.

15 When a user selects a message from list 100, the program guide can display a message display screen, such as message display screen 102 of FIG. 6. When the selected message is a message other than a notification message, the program guide can display the message
20 title, message text, and the option to keep or delete the selected message. When the selected message is a notification message, the program guide can display the program title as the message title and the program description as the message text. For a notification
25 message, the program guide can display the scheduled time and channel for the program. The program guide can also display options which are related to the program. For example, the program guide can display order option 104, keep option 106, delete option 108,
30 air times option 110, and reminder option 112. When the notification message is for a pay-per-view program, order option 104 can be displayed to provide the user with the opportunity to impulse order the program. When reminder option 112 is selected, the program guide

can provide the user with the opportunity to set a reminder for the program. When air times option 110 is selected, the program guide can provide the user with the opportunity to view a list of broadcast times.

5 When keep option 106 is selected, the program guide can keep the message for future reference by the user, and when delete option 104 is selected, the program guide can delete the message. The program guide can determine which options can be displayed based on the
10 program for which the notification message was received. For example, when the selected program is a pay-per-view program, order option 108 can be displayed. Air times option 110 can be displayed when there is more than one show time for the program.

15 A message can have been sent to users to announce to users that a program is coming soon (e.g., an e-mail advertisement for a future program which is not in the current time frame). For such messages, the program guide can display notify option 114. The time
20 and channel of the program can not be displayed in the message since the program is not yet listed in the current time frame of the program guide. When the notify option 114 is selected for a program that is not currently listed, the program guide can provide the
25 user with the opportunity to set a notification for that program.

For example, as shown in FIG. 7, when the user selects a notify option for a program that is not within the current time-frame of the program guide, the
30 program guide can display a notification display screen, such as illustrative notification display screen 116 of FIG. 7. A notification display screen, such as illustrative notification display screen 116, can be displayed under certain other circumstances.

For example, when a user selects an advertisement for a program that is not listed in the current time frame, the program guide can display notification display screen 116. Also, when a user selects a program from a coming soon display screen (discussed below), the program guide can display notification display screen 116. Moreover, when a user selects a program from a notifications display screen (e.g., notifications display screen 90 of FIG. 4), the program guide can display notification display screen 116 to provide the user with the opportunity to modify or delete that notification.

Notification display screen 116 can include the title of the program and a description of the program. When a user has set a notification by entering a title of a program (discussed below) and a description is not yet available for that program, the program guide can simply display a description that is blank. Notification display screen 116 can include user-selectable options. For example, notification display screen 116 can include delete option 118, remind option 120, message option 122, and e-mail option 124.

When delete option 118 is selected, the program guide can delete the notification. The types of notification desired can be specified with user-selectable options, such as remind option 120, message option 122, and e-mail option 124. The program guide can display a status indicator (e.g., a checkmark) in remind, message, and e-mail options 120, 122, and 124 to indicate that the user has already selected a notification of this type for the program.

When a user selects a remind option, such as remind option 120 of FIG. 7, the program guide can

display a reminder display screen, such as reminder display screen 126 of FIG. 8. Display screen 126 can provide the user with the opportunity to confirm the setting of a reminder for the upcoming program. When a remind option is selected for a program that a reminder notification has already been set, the program guide can provide the user with an opportunity to delete the reminder.

When a user selects a message option, such as message option 122 of FIG. 7, the program guide can display a set message display screen, such as set message display screen 128 of FIG. 9. Display screen 128 can provide the user with the opportunity to confirm that a message should be sent to the user's household when the program is scheduled (e.g., when the upcoming program is now determined to be scheduled to be displayed during the current time frame). When the message option (e.g., message option 122 of FIG. 7) is selected for a program for which the message option has already been set, the program guide can query the user to determine whether the message should be canceled.

When a user selects an e-mail option, such as e-mail option 124 of FIG. 7, the program guide can display an e-mail display screen, such as e-mail display screen 130 of FIG. 10. E-mail display screen 130 can provide the user with the opportunity to select to have an e-mail notification sent to the user's e-mail address. E-mail display screen 130 can provide the user with the opportunity to enter an email address. Depending on the program guide system arrangement, an e-mail address can be entered with a remote control, a keyboard, a display remote, etc. If desired, a setup display screen, discussed below, can provide the user with the opportunity to enter an e-

mail address which would then be applied to all e-mail notifications. When an e-mail option (e.g., e-mail option 124 of FIG. 7) is selected and the user had already set an e-mail option earlier to receive an e-mail notification, the program guide can provide the user with the opportunity to delete the e-mail notification.

As discussed above, when a user selects an advertisement for a non-frame program, the program guide can display a notification display screen, such as notification display screen 116 of FIG. 7. For example, a user can select interactive advertisements 76, 78, and 80 of FIG. 2, which are for programs that are not yet available in the current time frame of the program guide. As shown in FIG. 2, advertisement 76 can be for the Blair Witch Project, which is a future program that is coming to pay per view. Advertisement 78, an advertisement for Now and Again, can be for a new program to air in the fall television season which is now being advertised in the summer season. Advertisement 80 can be an advertisement for the upcoming new season of the E.R. television program which can commence in the next time frame. When a user selects any one of the three advertisements 76, 78, and 80, the program guide can display a notification display screen, such as notification display screen 116 of FIG. 7.

When a user selects an add-new-notification option, such as add-new-notification option 94 of FIG. 4, the program guide can display a new notification display screen, such as new notification display screen 132 of FIG. 11. Display screen 132 can provide the user with the opportunity to enter the title of a program for which the user desires to

receive a notification. The title can be entered with a remote control, keyboard, a display remote, or another suitable data entry interface. When a title is entered, the title can be added to a notification list, such as notification list 92 of FIG. 4. The title can be added without a description. The program guide can determine whether the title for the program is in the current time frame, which can be stored in a local database of the program guide or at a remote server.

10 When there is a match, the program guide can retrieve the matching information (e.g., program description). Display screen 132 can include options for providing the user with the opportunity to specify the types of notification desired (e.g., remind, message, e-mail, etc.).

15

After a user has set reminders for upcoming programs, the program guide can display a reminder list display screen, such as reminder list display screen 134 of FIG. 12. The program guide can automatically display reminder list display screen 134 shortly before the start of the upcoming program. Display screen 134 can include an overlay containing a list of reminders which have been set by the user. The overlay can be displayed on top of the video for the program that the user is currently watching. Display screen 134 can include a hide reminder option 136. When the user selects hide reminder option 136, the program guide can remove the overlay and return the user to viewing the current program. When the user selects a specific program in the list, the program guide can tune immediately to the channel showing that program. The program guide can provide the user with the opportunity to view the reminder list at any time until the listed programs end. The opportunity to

20

25

30

selectively view the reminder list at any time can, for example, be provided by providing a predetermined key on a remote control. The list can include reminders other than notification reminders (e.g., reminders set
5 for other features of the program guide), which can have been configured with a different configuration setup than for notification reminders.

Advance notification can be provided for programs that are coming soon. For example, the
10 program guide can include a coming soon option, such as coming soon option 72 of FIG. 2. When coming soon option 72 is selected, the program guide can immediately display a list of upcoming programs (e.g., display screen 138 of FIG. 14) or can first display a
15 selectable list of types of upcoming programs, such as coming soon display screen 140 of FIG. 13. Display screen 140 can contain a list of different types of upcoming programs in which the user can be interested. For example, as shown FIG. 13, the list can contain
20 options for upcoming pay-per-view movies, upcoming special events, returning series, announced new series, upcoming programs on a specific channel, etc.

When a user selects an option from display screen 140, such as pay-per-view movies option 142, the
25 program guide can display a coming soon display screen, such as coming soon display screen 138 of FIG. 14. Display screen 138 can contain a list of programs that match the selected program type (e.g., pay-per-view movies) and that are not yet within the current time
30 frame of the program guide. The list can be sorted alphabetically or by any other appropriate criteria. The list can include upcoming programs that have been scheduled to air outside the current time frame of the program guide. If desired, the list can include

upcoming programs that have not yet been scheduled. For example, the list can include upcoming programs that have been announced but not yet scheduled. The list can include an indicator for a program, such as
5 indicator 144. Indicator 144 can indicate that the user has already set a notification for that program. When the user selects a program from the list, the program guide can display a notification display screen for that program, such as notification display
10 screen 116 of FIG. 6. Notification display screen 116 can provide the user with the opportunity to set, delete, or modify a notification for the program.

The user can be provided with the opportunity to setup the configuration of notifications. For
15 example, when a user selects a setup option, such as setup option 74 of FIG. 2, the program guide can display a setup display screen, such as setup display screen 146 of FIG. 15. Setup display screen 146 can include notifications setup option 148. When a user
20 selects notifications setup option 148, the program guide can display a notification setup display screen, such as notification setup display screen 150 of FIG. 16. Display screen 150 can include reminder notice setup option 152, message notice setup
25 option 154, and e-mail notice setup option 154. If desired, setup display screen 146 can include an option for specifying whether reminders will be displayed on a television screen, a display remote, or both.

Reminder notice setup option 152 can provide
30 the user with the opportunity to specify how far in advance of a start time of an upcoming program a reminder notification should be displayed. Values for how far in advance a reminder notice can be displayed can be set for example to be in the range of one to

fifteen minutes. If desired, reminder notice setup option 152 can not be provided and the program guide can use settings from a general reminders feature (e.g., non-notification reminders). When a program is
5 not in a current time frame of the program guide, a reminder notification for that program can be set. Later, when the program guide determines that the program is now in the current time frame, the program guide can activate the reminder notification at an
10 appropriate time before the start time of that program.

When a user selects message notice setup option 154, the program guide can provide the user with the opportunity to specify the message notice time. The user can set the notice to receive a message
15 notification for a program a few hours before the program or as far ahead of the program as the available program guide data permits (e.g., the length of the current time frame). If desired, the program guide can use a default value for the message notice time (e.g.,
20 one day) or can generate the notification message as soon as the program is added to the local program listings database of the program guide.

When a user selects e-mail notice setup option 156, the program guide can provide the user with
25 the opportunity to specify the advance notice time for e-mail notifications. The values or defaults for advance notice time for e-mail notifications can be the same as the values for message notifications.

Notification setup display screen 150 can
30 provide a user with the opportunity to specify an e-mail notification address. If desired, the program guide can allow the user to specify an individual e-mail address for each notification. If desired, the program guide can have an e-mail address for the

household as part of an e-mail feature, and can use that address, rather than requiring the user to enter the address again.

If desired, the program guide can provide the user with the opportunity to setup the configuration notifications for each individual program. For example, the program guide can display in a notification display screen (e.g., notification display screen 116 of FIG. 7) a notification setup option, such as notification setup option 119 of FIG. 7. When a user selects notification setup option 119, the program guide can display a notification setup display screen, such as notification setup display screen 150 of FIG. 16, to setup the notifications for that program. An individual program notification setup can be available in addition to a general setup for notifications. If desired, a setup for notifications can include a general option that specifies whether reminders, messages, or e-mails should be generated whenever a program with a notification comes into the current time-frame of the program guide.

When the user sets a notification for a program, the program notification can be stored, preferably in non-volatile memory, at the user television equipment (e.g., user television equipment 44 of FIG. 1). If desired, when the program guide system is in a client-server arrangement, the program notification can be stored at a server (e.g., server 22 at television distribution facility 20 of FIG. 1).

When new schedule items are received by the program guide (either at server 22 or user television equipment 26), the incoming schedule items can be compared with the notification list (e.g., the programs

listed in notification list 92 of FIG. 4). When there is a match, the program guide can generate a notification for that program (e.g., reminder notification, e-mail notification, message notification
5 etc.). The type of notification desired can have been set earlier from a display screen, such as notification display screen 116 of FIG. 7. The advance notice time for the notification can have been set earlier from a display screen, such as notification setup display
10 screen 150 of FIG. 16.

For example, when a reminder notification has been set for a program that is determined to be in the current time frame, the program guide can schedule a reminder overlay for a specified number of minutes
15 prior to the start of the program. When a message or e-mail notification has been set, the program guide can immediately generate a notification or can schedule a task to generate a message or e-mail notification an appropriate number of days or hours prior to the
20 scheduled start of the program.

Illustrative steps involved in providing a notification feature are shown in FIG. 17. At step 152, the program guide can provide the user with the opportunity to select or specify an upcoming
25 program which is not yet in the current program listings time frame of the program guide.

If desired, step 152 can include informing the user of an upcoming program (step 154). For example, the program guide can display a coming soon
30 display screen (e.g., coming soon display screen 140 of FIG. 13). The program guide can display a different coming soon display screens based on category, type, actor, genre, etc. (e.g., coming soon display screen 138 of FIG. 14). The program guide can send a

message to a user announcing an upcoming program that is not yet in the program listings database of the program guide. The program guide can display advertisements for upcoming programs which are not in the current program listings time frame.

At step 152, the program guide can provide the user with the opportunity to select an upcoming program from a coming soon display screen (e.g., coming soon display screen 138 of FIG. 14), a message display screen (e.g., message display screen 102 of FIG. 6), a new notification display screen (e.g., by entering a program title or partial title from new notification display screen 132 of FIG. 11), a coming soon display screen for a category, such as genre, actor, rating, etc. (e.g., coming soon display screen 138 of FIG. 14 for upcoming pay-per-view programs), etc.

At step 156, the program guide can display information and user-selectable options that are related to the selected program. For example, the program guide can display a description, title, graphics, etc. about the selected program. As for user-selectable options, the program guide can provide the user with the opportunity to select an option to set a message notification (e.g., message option 122 of FIG. 7), to select an option to set an e-mail notification (e.g., e-mail option 124 of FIG. 7), to select an option to track a program (e.g., the program will be added to the notification list but no notification will be generated), to select an option to set a reminder notification (e.g., remind option 120 of FIG. 7), to select an option to purchase the selected program (e.g., order option 108 of FIG. 6), to select an option to have the program guide automatically tune to the channel carrying the select program at or about

the time of airing, to select an option to have the program guide automatically cause the program to be recorded when the program airs, etc.

When the user selects an option, the program
5 guide can provide the user with the opportunity to setup features related to the option. For example, the program guide can provide the user with the opportunity to select how far in advance a message, e-mail, or reminder notification should be sent. For purchase,
10 tune, and record options, the program guide can provide the user with the opportunity to specify parameters, such as day of the week, time of day, etc. For example, the user can be allowed to select to a time range in which the program guide is authorized to
15 purchase, tune, or record a program.

At step 158, when the user has selected an option, the program guide can collect information on which programs and which options have been selected (step 158a). The information can be collected at a
20 central location (e.g., television distribution facility 20 of FIG. 1). The information can be used to influence the scheduling of programming, the marketing of programming, the distribution of programming, and the targeting of advertisements, and to generate e-mail
25 notifications.

Step 158 can include providing the user with the opportunity to view or modify notifications set for programs (step 158b). For example, the program guide can provide the user with the opportunity at any time
30 to view a notifications list (e.g., notifications list 92 of FIG. 4). An item in the notification list can be automatically removed from the list after a selected notification has been provided or can be removed a predetermined number of days after the

program has been received within the local program
guide database (e.g., the current program listing time
frame). If desired, an item in the list can be removed
after the program has been viewed or after the program
5 is no longer available in the current time frame. The
list can include an indication of which programs are
presently in the current time frame of the program
guide. From the notification list, the user can be
provided with the opportunity to access a notification
10 display screen (e.g., notification display screen 116
of FIG. 7) in order to view, modify, or delete a
notification that has been set for a program.

Step 158 can include providing a notification
for a selected program which is now in the current
15 program listings time frame (step 158c). When the user
has set a notification message or reminder, the program
guide can display a reminder notification or send a
message notification when the program is determined to
be in the current time frame of the program guide. If
20 desired, a message notification can be sent or a
reminder notification can be displayed at a
predetermined notice time prior to the airing of the
program. When the user has set an e-mail notification,
an e-mail notification can be sent when it is
25 determined that the program is in the current time
frame of the program guide. If desired, the e-mail
notification can be sent at a predetermined time prior
to the airing of the program. The e-mail notification
can be sent from a central facility (e.g., television
30 distribution facility 20 of FIG. 1) or the program
guide can generate the e-mail notification locally at
user television equipment (e.g., user television
equipment 26 of FIG. 1). After a notification has been
provided, the status of a notification in the

notification list can be modified (e.g., the program can be removed from the list when all the notifications which had been set by user have been performed). At step 158c, the program guide can provide notification
5 options, such as to tune or record the selected program.

In the following discussion below with reference to FIG.'s 18 through 32, the present invention is discussed sometimes primarily in the
10 context of a program guide system with a mouse, a keyboard, or both as a user interface device (e.g., an on-line PC based program guide system). It is to be understood that the present invention is not limited to such an arrangement.

15 FIG. 18A shows an illustrative program guide display screen that can be provided in a PC based program guide system. Display screen 218 contains program listings 220 that can be organized in channel order from top to bottom and by broadcast time from
20 left to right. Cursors 222 and 224 can be used to navigate to earlier or later time periods, respectively. Browser cursors 226 and 228 allow a user to scroll through program listings 220. The user can also navigate through program listings 220 with time
25 navigation buttons 230 to view program listings for different times in the day. Calendar buttons 232 can be used to view program listings for different days of a month. The user can choose between various available view options by selecting a desired time, channel,
30 category, or search button from among view buttons 234.

FIG. 18B shows an illustrative coming soon program display screen 310 that can be provided as an option from the display screen 218 of FIG. 18A, or can be accessed independently. The user can activate the

coming soon program display screen from display screen 218 of FIG. 18A by means of box 236. Included on the coming soon program screen are non-frame television programs which are outside the current display time frame. For example, in FIG. 18B, there are several movies, including Titanic, The General, and Saving Private Ryan, all of which (at least for the purposes of this description) have not yet been released on cable television.

10 Program guide screen 310 can also include one or more markers 312 that indicate that information regarding other programs is now available to the user (e.g., a listing for Rushmore is in the current time frame). When data regarding a non-frame television
15 program is added, the non-frame television program by definition becomes an in-frame television program. The marker can be, for example, an icon, a color, a display order, and any combination thereof. More than one type of marker can be used on a single screen to indicate
20 more than one type of information regarding the television program. For example, a star placed next to the listing can indicate that the program will be broadcast on a pay-per-view channel and an underline can indicate optional on-line links to more information
25 and promotional offers.

 If a program is selected from coming soon display screen 310 of FIG. 18B, the user can be presented with a notification order display screen, such as notification order display screen 410 of
30 FIG. 19. Notification order display screen 410 can contain user-selectable options for ordering a notification. Notifications can notify the user when a particular television program is to be broadcast. As defined herein, the term "broadcast" refers to the

process of airing scheduled television programs by traditional television broadcast techniques, cable systems, or satellite systems. It will be appreciated that the methods and apparatus described herein can
5 also be used in connection with non-frame videos-on-demand.

FIG. 19 shows fields 414 and 418 in notification order display screen 410, which allow the user to enter a name and electronic mail address,
10 respectively, of the person receiving the notification. If desired, the user's name and electronic mail address can be automatically entered in fields 414 and 418 based on information previously provided to the system (e.g., information provided when the user registered
15 with the television program guide service). Use of electronic mail to remind users of program events which are in the current time frame is known (See, United States Patent Application No. 08/987,740, filed December 9, 1997, which is hereby incorporated by
20 reference in its entirety).

If the user is browsing program listings from a computer located at the user's office, the user can wish to have notifications addressed to his home (i.e., using his personal Internet access account and the
25 electronic mail address for the system at home). Alternatively, the user can wish to have notifications sent to an office electronic mail address. If the user has a common electronic mail address for both home and the office, notifications can be accessed at either
30 location. If desired, the system can provide more than one field 418 (e.g., field 421) so that notifications can be sent to more than one electronic mail address.

Notification order display screen 410 of FIG. 19 can also provide several user-selectable

options that specify when and how often the user will be notified of the airing of selected non-frame television programs. For example, notification order screen 410 can contain notify me box 424. Selecting an option in notify me box 424 allows the user to specify how often the system will generate and send a notification to the user. As shown in FIG. 19, the options in notify me box 424 can allow the user to be notified of the selected program only once, each time the program is being broadcast, each time the program is broadcast in a month, or at some other specified time. If "other" in notify me box 424 is selected, the user can be presented with screen 510 shown in FIG. 20. Such options can be selected with a mouse, keyboard, or any other suitable interface device. Screen 510 allows a user to specify a time period during which notifications will be generated and sent. The user can specify a time period by entering information in box 513.

Notification order display screen 410 of FIG. 19 can also contain how soon box 430. Selecting an option in box 430 allows the user to indicate how soon before the broadcast of the selected program notifications are to be generated and sent to the user. As shown in FIG. 19, box 430 can contain options that allow the user to be notified 1 hour, 1 day, 2 days, or another predetermined period of time before the selected program is broadcast. If "other" is selected in box 430, the user can be presented with display screen 510 of FIG. 21, which allows the user to specify a desired lead time before a scheduled event by completing box 515.

Upon completing display screen 510 of FIG. 21, the user can submit the information that has

been entered by selecting enter button 517. The user can exit display screen 510 without submitting the information by selecting exit button 519. If the user selects either enter button 517 or exit button 519, the user can be returned to the previous screen, such as notification order display screen 410.

The options that the user selects in boxes 424 and 430 of order display screen 410 determine, respectively, how often and when notifications will be sent. For example, a user can select a program from coming soon program display screen 310 of FIG. 18B. When the user selects a program from display screen 310 of FIG. 18B, the user can be presented with order display screen 410 of FIG. 19. If the user selects the "1 hour" option in box 430 and the "each time being broadcast" option in notify me box 424, the user will receive notifications (assuming fields 414 and 418 are completed with the user's own information) 1 hour before each broadcast of the program.

At any time during the completion of notification order display screen 410 (FIG. 19), the user can cancel the notification order by selecting cancel box 480. Selecting cancel box 480 can return the user to display screen 310 of FIG. 18B. Upon completing order notification display screen 410, the user can submit a notification order for processing by selecting submit box 440.

FIG. 21 shows an illustrative electronic mail notification 600. Notification 600 can display electronic mail address 611 of the person to whom the mail is being sent, name 613 of the program for which the notification is being sent, and information on when the television program is to be broadcast. The user

can delete notification 600 by selecting delete
button 618. An advertisement 620 (text, graphics,
video etc.) can be included in or attached to the
notification if desired. The advertisement can be
5 provided using information stored in a remote or local
database, such as databases 16, 24, or 36.

Notification 600 can also include interactive
links to various screens and services, including, but
not limited to a link to program guide display
10 screen 218 and a link promotional offers that can or
can not be interactive. When a user selects interactive
options 625 and 626, program events can be
automatically ordered/tuned, or recorded. If desired,
these options can be automatically removed from the
15 notification after being selected by a user to reduce
clutter on the notification. The options can also be
automatically removed after a predetermined period of
time following a particular event. A particular event
can occur (1) when data regarding the program is
20 received by a local database, (2) when data regarding
the program is received by a remote server, or (3) when
the user is notified.

Another aspect of the invention relates to
management of one's notifications. If desired,
25 notification order display screen 410 of FIG. 19 can
contain view current box 483. If view current box 483
is selected, the user can be presented with
illustrative current notifications display screen 710
of FIG. 22. Another way that the user can reach
30 current notifications screen 710 of FIG. 22 is by
selecting view current notifications button 233 in
display screen 218 of FIG. 18A. Current notifications
display screen 710 contains a list of all the user's
currently requested notifications. Information, such

as the program name, type of notification, and the date and time submitted can be displayed.

FIG. 22, shows an illustrative example of a current notification entry for the program "Primal
5 Fear". This notification was submitted by the user on November 1, 1997 at 3:03 p.m. and is set to notify the user one hour before each broadcast. Entries can be added to the current notification list as soon as the user sets a new notification (e.g., by selecting submit
10 button 440 from order notification screen 410 of FIG. 3). When an item in list is selected (e.g., positioning a highlight region on an item and pressing a data entry key), display screen 410 of FIG. 19 can be displayed to allow the user to modify the notification
15 configuration for the selected item in the list. If desired, the user can provided with the opportunity to change the configuration for an item in the list from the same display screen, display screen 710. An item can be removed from the list (e.g., by positioning a
20 highlight region on an item and selecting cancel 712).

Another component of display screen 218 is new notifications box 231. New notifications box 231, which can be adjacent to the program navigation controls of display 218, allows the user to order
25 notifications without using program listings 220. If new notifications box 231 is selected, the user can be presented with illustrative new notifications display screen 810 of FIG. 24.

New notifications screen 810 contains user-
30 selectable options similar to the options contained in notification order display screen 410 of FIG. 19. For example, new notifications display screen 810 contains user information box 813, how soon box 830, and notify me box 824. However, new notifications screen 810

allows the user to enter the title of a non-frame television program.

If the user does not enter the exact title of the non-frame television program in new notifications display screen 810, the data in the database 16, 24, or 36 or any other suitable set of television program listings data can be scanned to find the program or programs that most closely match the program title indicated by the user. If several matches are found, a list of the program matches can be presented to the user and the user can choose the actual program desired. Once the user has chosen a program from the list, the program title in box 818 can be automatically updated. If no matches are found, or if the user does not accept one of the offered choices, the title can be left as entered.

A user can exit new notifications display screen 810 at any time by selecting exit button 880. Selecting exit button 880 can return the user to display screen 218 of FIG. 18A.

Upon completing new notifications display screen 810, the user can submit the notification order for processing by selecting submit box 840. Selecting submit box 840 allows program guide system 10 (FIG. 1) to process the request. The request can be processed in the same way a notification request can be processed when ordered from notification order display screen 410 of FIG. 19.

The user can reach current notifications display screen 710 of FIG. 22 from new notifications display screen 810 of FIG. 23 by selecting view current notifications button 883.

The foregoing is merely illustrative of the principles of this invention and various modifications

110

What is Claimed is:

1. A method of providing interactive options for non-frame television programs using a system, the system having a current display time frame, the non-frame television programs being outside the current display time frame, the method comprising:

presenting on a display screen at least one option that corresponds to a non-frame television program;

allowing the user to select a first of said at least one option; and

providing the user a service associated with said first option.

2. The method of claim 1 wherein said system is a television program guide system.

3. The method of claim 2 further comprising determining at least one valid option from a plurality of possible options, wherein said presenting comprises presenting said at least one valid option.

4. The method of claim 2 further comprising:

receiving data that corresponds to said non-frame television program; and

wherein said presenting comprises presenting at least some of said data to the user.

5. The method of claim 4 further comprising:

storing said data in a database after said receiving; and

wherein said presenting comprises presenting at least some of said data stored in said database to the user.

6. The method of claim 5 wherein said presenting comprises notifying said user using a method selected from a group consisting of on-screen and on-line methods.

7. The method of claim 6 wherein said notifying comprises notifying said user according to at least one procedure selected from a group consisting: (a) notifying said user after said data is received by a local database, (b) notifying said user after said data is received by a remote server, (c) notifying said user on a day that said program is broadcast, (d) notifying said user at a predetermined period of time before said program is broadcast, (e) notifying said user after receiving a request from said user, and (f) any combination thereof.

8. The method of claim 6 further comprising:

providing to said user the ability to select a predetermined period of time before said notifying; and

wherein said notifying comprises notifying said user at said predetermined period of time before said program is broadcast.

9. The method of claim 5 wherein said presenting comprises notifying said user with electronic mail.

10. The method of claim 9 further comprising:

providing to said user the ability to select a predetermined period of time before said notifying; and

wherein said notifying comprises notifying said user at a predetermined period of time before said program is broadcast.

11. The method of claim 2 wherein said presenting comprises displaying a program guide screen that includes a marker that indicates that information regarding a program is included in a program guide database.

12. The method of claim 2 wherein said presenting comprises displaying a program guide screen that includes a notification list comprising said first option, said first option being identifiable with a marker selected from a group consisting of an icon, a color, a display order, and any combination thereof when data regarding said non-frame television program is added to a program guide database, said non-frame television program thereby becoming an in-frame television program.

13. The method of claim 2 wherein said presenting comprises displaying a program notification on a program guide screen.

14. The method of claim 13 further comprising:

storing information regarding said non-frame program in a program guide database; and

wherein said displaying comprises displaying said notification immediately before said program is broadcast.

15. The method of claim 13 further comprising:

storing information regarding said non-frame program in a program guide database; and

wherein said displaying a program notification includes displaying an option to tune to said program.

16. The method of claim 13 wherein said displaying interrupts another television program.

17. The method of claim 13 further comprising:

providing to said user the ability to specify notification parameters before said notifying; and

wherein said notifying comprises notifying said user at a predetermined period of time before said program is broadcast.

18. The method of claim 13 wherein said displaying a program notification includes displaying an option to record a program.

19. The method of claim 2 wherein said presenting comprises presenting the user with an option to purchase a pay-per-view non-frame television program when the program is in-frame.

20. The method of claim 2 wherein said presenting comprises presenting the user with an option to automatically tune to a channel carrying said program when said program is broadcast.

21. The method of claim 2 wherein said presenting comprises presenting the user with an option to automatically record said program on a recording device when said program is broadcast.

22. The method of claim 2 wherein said at least one option is a notification list of options, said method further comprising automatically removing said first option from said list after said providing.

23. The method of claim 2 wherein said at least one option is a notification list of options, said method further comprising automatically removing said first option from said list after a predetermined period of time following an event, wherein said event is selected from a group consisting of (1) the time when data regarding said program is received by a local database, (2) the time when data regarding said program is received by a remote server, and (3) the time when said user is presented with said at least one option.

24. The method of claim 2 wherein said presenting is in response to a user request, said presenting comprising presenting a notification list including said at least one option.

25. The method of claim 24 wherein said notification list further includes at least one option that corresponds to an in-frame television program,

said presenting comprising presenting said at least one option in said list such that said in-frame and non-frame options are distinguishable to said user.

26. A method for providing notifications of non-frame television programs to a user using a system, the system having a current display time frame, the non-frame television programs being outside the current display time frame, the method comprising:

allowing the user to specify a non-frame television program outside of the current display time frame with a set-top box in the system; and

notifying the user with the system when the non-frame television program is now in-frame and is to be broadcast.

27. The method of claim 26 wherein said system is a television program guide system.

28. The method of claim 27 further comprising providing a notification option which the user selects to order notifications.

29. The method of claim 28 wherein said notification option includes a how soon option for determining how soon before the broadcast of the non-frame television program the notification is to be generated and sent to the user.

30. The method of claim 27 further comprising providing a view current notifications option which the user selects to receive a list of current notification orders.

31. The method of claim 27 further comprising providing a new notifications option that the user selects to order a notification by entering a program title.

32. An apparatus for providing notifications of non-frame television programs to a user using a television program guide system, the television program guide system having a current display time frame, the non-frame television programs being outside the current display time frame, the apparatus comprising:

means for allowing the user to specify a non-frame television program outside of the current display time frame; and

means for notifying the user when the non-frame television program is now in-frame and is to be broadcast.

33. The apparatus of claim 32 further comprising means for providing a notification option which the user selects to order notifications.

34. The apparatus of claim 33 wherein the means for providing a notification option includes means for providing a how soon option for determining how soon before the broadcast of the non-frame television program the notification is to be generated and sent to the user.

35. The apparatus of claim 33 wherein the means for providing a notification option includes means for providing a how often option for determining how often the notification is to be generated and sent to the user.

means for receiving data that corresponds to said non-frame television program; and wherein said means for presenting can present at least some of said data to the user.

41. The apparatus of claim 40 further comprising:

a database for storing said data after said data is received; and

wherein said means for presenting can present at least some of said data stored in said database to the user.

42. The apparatus of claim 41 wherein said means for presenting can notify said user using a method selected from a group consisting of on-screen and on-line.

43. The apparatus of claim 42 wherein said means for notifying can notify said user according to at least one procedure selected from a group consisting: (a) notifying said user after said data is received by a local database, (b) notifying said user after said data is received by a remote server, (c) notifying said user on a day that said program is broadcast, (d) notifying said user at a predetermined period of time before said program is broadcast, (e) notifying said user after receiving a request from said user, and (f) any combination thereof.

44. The apparatus of claim 42 further comprising:

means for providing to said user the ability to select a predetermined period of time before said notifying; and

wherein said means for notifying can notify said user at said predetermined period of time before said program is broadcast.

45. The apparatus of claim 41 wherein said means for presenting can notify said user with electronic mail.

46. The apparatus of claim 45 wherein said means for notifying can notify said user according to at least one procedure selected from a group consisting: (a) notifying said user after said data is received by a local database, (b) notifying said user after said data is received by a remote server, (c) notifying said user on a day that said program is broadcast, (d) notifying said user at a predetermined period of time before said program is broadcast, (e) notifying said user after receiving a request from said user, and (f) any combination thereof.

47. The apparatus of claim 45 further comprising:

means for providing to said user the ability to select a predetermined period of time before said user is notified; and

wherein said means for notifying can notify said user at a predetermined period of time before said program is broadcast.

48. The apparatus of claim 38 wherein said means for presenting can display on said display screen

a marker that indicates that information regarding a user-selected program is included in a program guide database.

49. The apparatus of claim 38 wherein said means for presenting can display a program notification on said program guide screen.

50. The apparatus of claim 49 further comprising:

a program guide database for storing information regarding said non-frame program; and wherein said means for displaying can display said notification immediately before said program is broadcast.

51. The apparatus of claim 50 further comprising:

a program guide database for storing information regarding said non-frame program to; and wherein said means for displaying can display an option to tune to said program.

52. The apparatus of claim 49 wherein said means for displaying can interrupt another television program.

53. The apparatus of claim 49 further comprising:

means for providing said user the ability to specify notification parameters before said user is notified; and

event, wherein said event is selected from a group consisting of (1) the time when data regarding said program is received by a local database, (2) the time when data regarding said program is received by a remote server, and (3) the time when said user is presented with said at least one option.

60. The apparatus of claim 38 wherein said presenting can be in response to a user request, and wherein said means for presenting can present a notification list including said at least one option.

61. The apparatus of claim 60 wherein said notification list further includes at least one option that corresponds to an in-frame television program, and wherein said means for presenting can present said at least one options in said list such that said in-frame and non-frame options are distinguishable to said user.

62. A system comprising:

a television distribution facility that provides (1) television programming, (2) television program listings that cover only television programming from the present through a predetermined time period, and (3) notifications of upcoming television programs scheduled to be broadcast after the predetermined time period; and

a plurality of user television equipment devices, wherein each of said devices is connected to the television distribution facility, and wherein each of said devices is configured to:

receive and display the television programming provided by the television distribution facility;

receive and display the television program listings that cover only the television programming from the television programming from the present through the predetermined time period; and receive and display the notifications of the upcoming television programs scheduled to be broadcast after the predetermined time period, wherein the notifications are not part of the television programming.

63. A method for receiving notifications for upcoming programs, comprising:

providing a user with the opportunity to select a program that will air outside a program listings time frame which is currently available to the user; and

providing a notification to the user of the availability of the selected program during when the selected program is now in the current program listings time frame.

64. The method defined in claim 63 further comprising displaying a list of programs for which a notification is to be provided.

65. The method defined in claim 63 wherein providing a notification includes providing an e-mail notification.

66. The method defined in claim 63 wherein providing a notification includes providing a message notification.

67. The method defined in claim 63 wherein providing a notification includes providing a reminder notification.

68. The method defined in claim 63 further comprising providing the user with the opportunity to setup a configuration of the notification.

69. A program guide system, comprising:
user equipment that is configured to provide a user with the opportunity to select a program that will air outside the program listings time frame which is currently available to the user, and is further configured to provide a notification to the user of the availability of the selected program when the selected program is now in the current program listings time frame.

70. The system defined in claim 69 wherein the user equipment is user television equipment.

71. The system defined in claim 69 wherein the user equipment is user personal computer equipment.

71. The system defined in claim 69 wherein the user equipment is further configured to display a list of programs for which a notification is to be provided.

71. The system defined in claim 69 wherein the user equipment is configured to provide an e-mail notification.

72. The system defined in claim 69 wherein the user equipment is configured to provide a message notification.

73. The system defined in claim 69 wherein the user equipment is configured to provide a reminder notification.

74. The system defined in claim 69 wherein the user equipment is configured to provide the user with the opportunity to setup a configuration of the notification.

75. In a user television equipment, a method for receiving notifications for upcoming programs, comprising:

providing a user with the opportunity to specify a program that will air outside a current program listings time frame of user television equipment; and

displaying a notification of the availability of the selected program during when the selected program is now in the current program listings time frame of the user television equipment.

76. The method defined in claim 75 further comprising displaying a list of programs for which a notification is to be provided.

77. The method defined in claim 75 wherein displaying includes displaying a message notification.

78. The method defined in claim 75 wherein displaying includes displaying a reminder notification.

79. The method defined in claim 75 further comprising providing the user with the opportunity to setup a configuration of the notification.

80. A program guide system, comprising user television equipment that is configured to provide a user with the opportunity to select a program that will air outside the current program listings time frame of the user television equipment, and is further configured to display a notification of the availability of the selected program when the selected program is now in the current program listings time frame of the user television equipment.

81. The system defined in claim 80 wherein the user television equipment is further configured to display a list of programs for which a notification is to be provided.

82. The system defined in claim 80 wherein the user television equipment is configured to display a message notification.

83. The system defined in claim 80 wherein the user television equipment is configured to display a reminder notification.

84. The system defined in claim 80 wherein the user television equipment is configured to provide the user with the opportunity to setup a configuration of the notification.

ELECTRONIC PROGRAM GUIDE
WITH ADVANCE NOTIFICATION

Abstract of the Disclosure

A non-frame television program guide
5 notification system is provided. The system allows a
user at a system to order and receive notifications of
non-frame television programs. The user can order
notifications by selecting a program or supplying a
program title directly. The user can specify when and
10 how often the notifications will be generated and
received. If desired, the user can view a list of all
currently requested notifications. Entries can be
added to the list or the user can cancel a previously
ordered notification.

DECLARATION AND POWER OF ATTORNEY

As a below named inventor, I hereby declare that:

My residence, post office address and citizenship are as stated below next to my name;

I believe I am an original, first and sole inventor (if only one name is listed below) or an original, first and joint inventor (if plural names are listed below) of the subject matter which is claimed and for which a patent is sought on the invention entitled:

ELECTRONIC PROGRAM GUIDE WITH
ADVANCE NOTIFICATION

the specification of which

[X] is attached hereto

[] was filed on _____ as
Application Serial No. _____.

I hereby state that I have reviewed and understand the contents of the above-identified specification, including the claims.

I do not know and do not believe that the invention was ever patented or described in any printed publication in any country before my or our invention thereof or more than one year prior to this application.

I do not know and do not believe that the invention was in public use or on sale in the United States of America more than one year prior to this application.

I acknowledge the duty to disclose to the United States Patent and Trademark Office all information known by me to be material to patentability as defined in Title 37, Code of Federal Regulations, § 1.56.

I hereby claim foreign priority benefits under Title 35, United States Code, § 119(a)-(d) of any foreign application(s) for patent or inventor's certificate listed below and have also identified below any foreign application for patent or inventor's certificate having

a filing date before that of the application on which priority is claimed:
